

New characteristics:

- The option **Export** of the menu **Statistic** has been modified, from now on we will be able to decide if we want to export only the selected elements or all of them.
- The close of the sessions for the asset included in the market ASX (Australia) has been updated (only in the installation package).
- In the systems configuration options, a new way to fill the limit orders (configurable in the properties editor) has been included: This new way enables to execute the limit orders only if the price is overcome and not only touched.
- Brokerage with Interactive Brokers:
 - From now on, we can trade the asset “Coffe C” (ICE-USA).
 - The rounded of to 4 decimal in the execution price of the order closing a position has been deleted.

Problems solved:

- An error has been fixed in the studies programmed in PDV as these studies could not be compiled (only in the installation package).
- An error has been fixed in the buy/sell window when working with assets with small minimal movement as sometimes it was not visualized correctly in the buy/sell window.
- Several errors have been fixed in the Renko representation for ticks charts.
- An error has been fixed in the use of certain indicators with special representation types (Point&Figure, Renko, Three Line Break, Kagi).

More

New characteristics:

Charts

- The calculation in real time of the special representation types (Points&Figure, Renko, Three Line Break and Kagi) has been optimized.
- When changing the chart representation, this one is kept for the different compression types except for the ticks' charts. The colors configuration is also kept except for minutes and ticks charts.
- The number of days loaded for tick charts is kept when a workspace is stocked and restored.

Statistics

- The option **Export** of the menu **Statistic** has been modified, from now on we will be able to decide if we want to export only the selected elements or all of them.

Brokerage

- Time and volume restriction:
 - In the buy and sell dialog box the type restrictions are now put in alphabetical order.
- Interactive brokers:
 - We are able now to trade the asset "Coffe C" (ICE-USA).
- Pro-CFD:
 - New lists have been included.

Markets (only in the installation package)

- The close of the sessions for the asset included in the market ASX (Australia) has been updated (only in the installation package).
- The time difference for the market **S&P Indices Complete** has been modified into -4.
- The session start time for the **Stockholm stock Exchange** has been modified (from 9:30 to 9:00).

Systems

- When there is more than one system inserted the statistics opens up straight away for the selected one instead of giving the choice.
- In the systems configuration options, a new way to fill the limit orders (configurable in the properties editor) has been included: This new way enables to execute the limit orders only if the price is overcome and not only touched.

Other

- The properties editor shows up when clicking the keys combination **Alt + Enter**.
- The behavior for the graphic objects loaded partially outside the screen has been modified. They were deleted previously but now they are kept and only the ones totally outside the screen are deleted.
- The option **define a customized band** has been included when selecting the **histogram** representation in indicators (Properties editor -> Histogram band).
- **PDV programming**. Two new options have been included in the contextual menu (Up/down) in the toolbar in order to put in order the elements.

Solved problems:

Studies

- An error has been fixed in the studies programmed in PDV as sometimes they could not be compiled (installation package).

Charts

- An error have been fixed as sometimes the charts did no longer received real time if the start time was modified (properties editor).
- An error has been fixed in the **ticks compression** as under certain circumstances, we could obtain different values with the tool **fill gaps in the menu Data**.
- An error has been fixed as under certain circumstances the last period in **week and month chart compressions** did not show correctly. Due to this error, the bar corresponding to the last period was represented with subsequent date.
- An error has been solved in special compressions (Point&Figure, Renko, Three Line Break, Kagi) as the first bar on screen was not represented correctly.
- Several errors have been solved in the **Renko representation**:
 - The **Renko percentage** was not represented correctly ass a bullish box was added even though the price was not overcome by two boxes.
 - An error causing an unexpected close of Visual Chart V when comparing charts in **Renko** representation has been fixed.
 - An error has been fixed as the box size was not represented correctly in **Renko representation**, when copying the flap as a recalculation was made.
- Several problems have been resolved with tick compressions charts:
 - An error in the tick charts in assets with high volume negotiation has been fixed (especially in currencies) as this error could block the software.
 - An error has been fixed as, under certain circumstances, the chart scale in tick charts was not represented correctly.
 - The value of the **limits for charts with more than one tick compression** has been modified.
- An error has been fixed as in some occasions and by using certain types of charts representation (eg Kagi), the chart was not selected when clicking it.
- An error has been fixed as in some occasions several windows superior to the maximum size could be created.
- An error has been fixed as in some occasions, after saving a workspace with intraday charts and loading it again the charts opened up with the historical default size.
- An error has been fixed in computers with O.S in English from USA, the chart scale did not show with the adequate digits.
- An error has been fixed as in some occasions, when opening a workspace the order of drawing of the objects could be modified.

Brokerage

- A problem has been solved when working with assets with small ticks as the buy/sell window did not show properly.
- A mistake has been solved as the buy and sell dialog box did not appear correctly after erasing a monitor, it the dialog boxes where situated in the erased monitor.
- A mistake has been solved as the time and volume restriction were not respected when loading an order suggested from the menu Community.
- A mistake has been solved as the dialog box for orders confirmation did not show up when sending them from the ticket form even though the configurations options were configured to do so.
- Time and volume restrictions:
 - Visual Chart uses by default several types of restriction depending on the broker it is connected to.
 - The order being sent is taken into account to select the default restrictions.
 - In a made order (OSO, OCO or BRACKET), when changing the validity date in teh main order it is set correctly in the secondary orders.
- Brokerage with Interactive Brokers:
 - An error has been fixed in the rounding of in assets with more than 4 decimals.

Indicadtors

- An error has been fixed as the volume indicator could not be inserted in the chart if some other element was using it.
- An error has been fixed in the calculation of the Trend Tracking Indicator (installation package).
- An error has been fixed as in some occasions when changing the dates of the historical data the indicator ATR Width Average % (AvTrueRangeP).
- An error has been fixed in the calculation of the Zigzag indicator installation package).
- An error has been fixed as the MACDHEMEL indicator could not be inserted i the CCI.
- An error has been fixed causing that certain indicator did not draw up the trend correctly.
- An error has been fixed as the color set in the VBA code of the indicators was not set correctly VBA.
- An error has been fixed in the trend representation of the RainbowChartOsc.
- An mistake that could cause an error in the program when using several indicators in charts with special compressions (Point&Figure, Renko, Three Line Break, Kagi) has bee fixed.

These were the indicators:

- MomentumSpreadOsc
- SpreadOsc
- CorrelationIndex
- RSC
- DisagreeSpreadSour
- DisagreeSpread
- PercentSpreadOsc
- PercentSpread

Other

- VBA functions. An error has been fixed as in some occasion the functions VBA StandardDeviation, AvgTrade, AvgWinningTrade and AvgLosingTrade were not calculated correctly.
- Use of Trading Tools. An error has been fixed as the real time bar of an indicator was not calculated correctly if the indicator was inserted in a daily bar chart.
- An error has been fixed in the command **Copy Links to Excel** as the option did not work correctly with Office 2010.
- An error has been fixed in the Export of links to excel as the language could be mistaken if the office language was different to the operating system one.
- Now the width and order of the columns in the list and DOM windows are stocked correctly.
- An error has been fixed as the option visible image was not stocked correctly in the templates.
- The functionality of the **horizontal ruler** has been modified and now, in the properties editor, we can decide if we want to show the total number of bars or the difference between them.
- An error has been fixed in the **Volume Distribution** (TPOs), as it the software returned it to the original configuration every time the customer closed the software.
- A problem has been resolved when modifying the color of the header of an explorer as teh first field did not change its color.
- Bid/Ask viewfinder. An error has been fixed when using a symbol without decimals as the bid/ask viewfinder represented 2 zeros.
